Vocabulary richness, including lexical diversity and use of rare words, has an important role

in assessing proficiency, diagnosing progress and testing theory in the study of language development. This book reviews different methods for quantifying how vocabulary is deployed in spontaneous speech and writing, before introducing an alternative approach which can assess overall lexical diversity, measure morphology development and compare the development of different word classes. The new approach is illustrated by its application to first and second language learners. Based on extensive research, *Grammar and Beyond* ensures that students study accurate information about grammar and apply it in their own speech and writing. The seventh volume in the Institute of Classical Archaeology's series on the rural countryside (chora) of Metaponto is a study of the Greek sanctuary at Pantanello. The site is the first Greek rural sanctuary in southern Italy that has been fully excavated and exhaustively documented. Its evidence—a massive array of distinctive structural remains and 30,000-plus artifacts and ecofacts—offers unparalleled insights into the development of extra-urban cults in Magna Graecia from the seventh to the fourth centuries BC and the initiation rites that took place within the cults. Of particular interest are the analyses of the well-preserved botanical and faunal material, which present the fullest record yet of Greek rural sacrificial offerings, crops, and the natural environment of southern Italy and the Greek world. Excavations from 1974 to 2008 revealed three major phases of the sanctuary, ranging from the Archaic to Early Hellenistic periods. The structures include a natural spring as the earliest locus of the cult, an artificial stream (collecting basin) for the spring's outflow, Archaic and fourth-century BC structures for ritual dining and other cult activities, tantalizing evidence of a Late Archaic Doric temple atop the hill, and a farmhouse and tile factory that postdate the sanctuary's destruction. The extensive catalogs of material and special studies provide an invaluable opportunity to study the development of Greek material culture between the seventh and third centuries BC, with particular emphasis on votive pottery and figurative terracotta plaques. This controversial new study, breaks with the tradition of basing political studies on analyses of institutions and political personalities, by likening the Republic of Korea to a laboratory for the clash of political cultures. In the late 1940s, the Americans embarked upon a democratization programme designed to create a Western bulwark against the spread of communism in East Asia. The intervening years have seen the advent and demise of military rule, with South Korea now having a democratically-elected government. Although the US strategy thus seems successful, the political crises of 1995 in fact indicate that many obstacles remain here to the adoption of Western-style democracy. This study argues that socialization in general and political socialization in particular are key factors in any analysis of democracy, be it in Korea or elsewhere. Accordingly, the work draws on moral education textbooks, together with surveys and interviews among members of the urban intellectual elite. In this manner, the psychological roots of power and authority - key concepts to an understanding of 'good government' - are explored.
