This book constitutes the refereed proceedings of the 6th International Conference on Autonomic and Trusted Computing, ATC 2009, held in Brisbane, Australia, in July 2009, co-located with UIC 2009, the 6th International Conference on Ubiquitous Intelligence and Computing. The 17 revised full papers presented together with one invited paper and one keynote talk were carefully reviewed and selected from 52 submissions. The regular papers are organized in topical sections on organic and autonomic computing, trusted computing, wireless sensor networks, and trust. Currently the Vice President of the International Society for Philosophical Enquiry (ISPE) as well as featured writer for the Mensa International Journal, Hally takes an active interest in human intelligence in all its forms and applications. Hally explores the science behind both human and artificial intelligence, even touching on animal intelligence to appease the animal lovers among us. By blending factual analyses with humor and plenty of background information to keep readers on the right page, Hally manages to render a potentially dry, dense subject more accessible. In fact, some of the most endearing qualities of this book are its frankness and careful accessibility. Each essay is prefaced with a helpful, yet non-condescending, introduction. It's an excellent gateway book for a novice who'd like an overview of general concepts of intelligence Those who are well-versed in the area of intelligence study are likely to enjoy this book for the perspectives it offers.

As such, I'd recommend this book to anyone having an interest in the topic of intelligence, regardless of the level of refinement of that interest. Definite thumbs up! Shannon D. Moody, Diplomacy and International Commerce, M.A., French Language and Literature. «Бизнес-журнал» (www.b-mag.ru) - самое массовое всероссийское деловое издание, адресованное предпринимателям, управляющим собственникам и топ-менеджерам компаний. Examining Information Retrieval and Image Processing Paradigms in Multidisciplinary Contexts is a key source on the latest advancements in multidisciplinary research methods and applications and examines effective techniques for managing and utilizing information resources. Featuring extensive coverage across a range of relevant perspectives and topics, such as knowledge discovery, spatial indexing, and data mining, this book is ideally designed for researchers, graduate students, academics, and industry professionals seeking ways to optimize knowledge management processes. While most people would not consider sponsoring an orphan's education to be in the same category as international humanitarian aid, both acts are linked by the desire to give. Many studies focus on the outcomes of humanitarian work, but the impulses that inspire people to engage in the first place receive less attention. Disquieting Gifts takes a close look at people working on humanitarian projects in New Delhi to explore why they engage in philanthropic work, what humanitarianism looks like to them, and the ethical and

political tangles they encounter. Motivated by debates surrounding Marcel Mauss's The Gift, Bornstein investigates specific cases of people engaged in humanitarian work to reveal different perceptions of assistance to strangers versus assistance to kin, how the impulse to give to others in distress is tempered by its regulation, suspicions about recipient suitability, and why the figure of the orphan is so valuable in humanitarian discourse. The book also focuses on vital humanitarian efforts that often go undocumented and ignored and explores the role of empathy in humanitarian work. A practical guide to the maintenance and repair of laptop computers, including three hundred repair cases and thirteen diagnostic flowcharts. In the fall of 1930, David Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there are many successful companies, there is only one Hewlett-Packard, because from the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to business has been immortalized as The HP Way. In this book, David Packard tells the simple yet

extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago. This book constitutes the refereed proceedings of the 6 th International Conference on Knowledge Science, Engineering and Management, KSEM 2013, held in Dalian City, China, in August 2013. The 50 revised papers (33 regular papers, 18 short papers, and keynote and invited talks) were carefully reviewed and selected from various submissions. Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews. This three-volume set of books highlights major advances in the development of concepts and techniques in the area of new technologies and architectures of contemporary information systems. Further, it helps readers solve specific research and analytical problems and glean useful knowledge and business value from the data. Each chapter provides an analysis of a specific technical problem, followed by a numerical analysis, simulation and implementation of the solution to the real-life problem. Managing an organisation, especially in today's rapidly changing circumstances, is a very complex process. Increased competition in the marketplace, especially as a result of the massive and successful entry of foreign businesses into domestic markets, changes in consumer behaviour, and broader access to new technologies and information, calls for organisational restructuring and the introduction and modification of management methods using the latest advances in science. This situation has prompted many decision-making bodies to introduce computer modelling of organisation management systems. The three books present the peer-reviewed proceedings of the 39th International Conference "Information Systems Architecture and Technology" (ISAT), held on September 16-18, 2018 in Nysa, Poland. The conference was organised by the Computer Science and Management Systems Departments, Faculty of Computer Science and Management, Wroclaw University of Technology and Sciences and University of Applied Sciences in Nysa, Poland. The papers have been grouped into three major parts: Part I—discusses topics including but not

limited to Artificial Intelligence Methods, Knowledge Discovery and Data Mining, Big Data, Knowledge Based Management, Internet of Things, Cloud Computing and High Performance Computing, Distributed Computer Systems, Content Delivery Networks, and Service Oriented Computing. Part II—addresses topics including but not limited to System Modelling for Control, Recognition and Decision Support, Mathematical Modelling in Computer System Design, Service Oriented Systems and Cloud Computing, and Complex Process Modelling. Part III—focuses on topics including but not limited to Knowledge Based Management, Modelling of Financial and Investment Decisions, Modelling of Managerial Decisions, Production Systems Management and Maintenance, Risk Management, Small Business Management, and Theories and Models of Innovation. Data warehousing and knowledge discovery has been widely accepted as a key technology for enterprises and organizations to improve their abilities in data analysis, decision support, and the automatic extraction of knowledge from data. With the exponentially growing amount of information to be included in the decision-making process, the data to be considered become more and more complex in both structure and semantics. New developments such as cloud computing add to the challenges with massive scaling, a new computing infrastructure, and new types of data. Consequently, the process of retrieval and knowledge discovery from this huge amount of heterogeneous complex data forms the litmus test for research in the area. In the last decade, the International Conference on Data Warehousing and Knowledge Discovery (DaWaK) has become one of the most important international scientific events bringing together researchers, developers, and practitioners to discuss the latest research issues and experiences in developing and deploying data warehousing and knowledge discovery systems, applications, and solutions. This year's conference, the 12 International Conference on Data Warehousing and Knowledge Discovery (DaWaK 2010), continued the tradition by discussing and disseminating innovative principles, methods, algorithms, and solutions to challenging problems faced in the development of

data warehousing, knowledge discovery, the emerging area of "cloud intelligence," and applications within these areas. In order to better reflect novel trends and the diversity of topics, the conference was organized in four tracks: Cloud Intelligence, Data Warehousing, Knowledge Discovery, and Industry and Applications. With the growing use of new technologies and artificial intelligence (AI) applications, intelligent systems can be used to manage large amounts of existing data in healthcare domains. Having more intelligent methods for accessing data allows medical professionals to more efficiently identify the best medical practices and more concrete solutions for diagnosing and treating a multitude of rare diseases. Intelligent Systems for Healthcare Management and Delivery provides relevant and advanced methodological, technological, and scientific approaches related to the application of sophisticated exploitation of AI, as well as providing insight into the technologies and intelligent applications that have received growing attention in recent years such as medical imaging, EMR systems, and drug development assistance. This publication fosters a scientific debate for new healthcare intelligent systems and sophisticated approaches for enhanced healthcare services and is ideally designed for medical professionals, hospital staff, rehabilitation specialists, medical educators, and researchers. This is the ninth volume of *Babel und Bibel*, an annual of ancient Near Eastern, Old Testament, and Semitic studies. The principal goal of the annual is to reveal the inherent relationship between Assyriology, Semitics, and biblical studies—a relationship that our predecessors comprehended and fruitfully explored but that is often neglected today. The title *Babel und Bibel* is intended to point to the possibility of fruitful collaboration among the three disciplines, in an effort to explore the various civilizations of the ancient Near East. This volume includes as a major portion of its contents selected papers from the 6th Biannual Meeting of the International Association for Comparative Semitics. *The Rise and Fall of Human Rights* provides a groundbreaking ethnographic investigation of the Palestinian human rights world—its NGOs, activists, and "victims," as well as their politics, training, and discourse—since 1979. Though human rights activity began as a means of struggle against the Israeli occupation, in failing to end the Israeli occupation, protect basic human rights, or establish an accountable Palestinian government, the human rights industry has become the object of cynicism for many Palestinians. But far from indicating apathy, such cynicism generates a productive critique of domestic politics and Western interventionism. This book illuminates the successes and failures of Palestinians' varied engagements with human rights in their quest for independence. As the official publication for *Windows Vista*, we cover Microsoft's latest OS with more depth, passion and clarity than any other magazine on the market. Each issue is packed with tips, tricks and service elements on every page. We give you an insider's tour of the operating system and illustrate how to get the most out of your PC. *Global Strategic Management 2e* provides a truly global, as opposed to multinational, perspective on strategy. It covers both traditional strategic

management topics as well as new topics, such as corporate social responsibility and new technologies. Global Strategic Management gives the student a thorough understanding of the wide range of theories and research available in this field, and provides a wealth of both mini- and full-length cases of successful global companies from the United States, Europe and emerging economies. Continuing with the concise treatment of topics, accessible writing style and clear structure that were such strengths of the first edition of this text, the second edition comprises 13 chapters divided into five parts. A new chapter on global leadership and motivation has been added and coverage of the topic of control is included within this chapter. A second new chapter, on knowledge and innovation, has also been added. A fifth part on innovation has been introduced to clearly outline the importance of this area to global strategy. A full complement of pedagogical features are consistently applied throughout the text in order to support students and to ensure they benefit from the wide-ranging content. Chapter summaries ensure students have a clear understanding of key points, and discussion questions allow the reader to check their understanding and think around the subject. The text is also supported by an Online Resource Centre, which has been fully updated to compliment the new edition of the text. In Evangelist Marketing, Alex Goldfayn argues that technology companies succeed in spite of their

marketing, not because of it. He says that if consumer tech makers ceased all marketing activity today, they would not see a significant decline in sales. In this book, Alex presents why the current state of overly-technical, features-oriented tech marketing, branding, communications and public relations is costing the industry billions of dollars—easy money that's voluntarily being left on the table. Then he lays out a step-by-step system for creating intensely loyal brand evangelists based on deep consumer insights and simple, emotional language. Evangelist Marketing is written for consumer tech companies big and small—from PC manufacturers to Web-based services. It's also sure to improve the work of their marketing and public relations agencies. Desde hace un tiempo, la seguridad en las comunicaciones, en general, y en las inalámbricas, en particular, se ha convertido en un tema de continua actualidad y es un elemento crucial que cualquier administrador de red debe asumir como objetivo principal. En este libro, su autor (docente e investigador) explica cuidadosamente el abecé de las redes inalámbricas desde un punto de vista totalmente práctico, con cientos de ejemplos reales. La obra le brindará la oportunidad de ponerse en la piel de un hacker y experimentar los métodos que

usaría para romper la confidencialidad de sus comunicaciones, todo ello en un entorno completamente controlado. De este modo, podrá estar preparado para afrontar cualquier intento de intrusión en su red Wi-Fi. BackTrack 5. Hacking de redes inalámbricas se perfila como un libro esencial en la biblioteca del consultor o administrador de redes. Como experto, o entusiasta, le guiará paso a paso por los diferentes modos para atacar y defenderse de las ofensivas que pudieran lanzarse contracualquier elemento de la infraestructura de red. Se incluyen, así mismo, las principales referencias a las que el lector podrá acudir para ampliar los conceptos tratados en la obra. This book has been motivated by an urgent need for designing and implementation of innovative control algorithms and systems for tracked vehicles. Nowadays the unmanned vehicles are becoming more and more common. Therefore there is a need for innovative mechanical constructions capable of adapting to various applications regardless the ground, air or water/underwater environment. There are multiple various activities connected with tracked vehicles. They can be distributed among three main groups: design and control algorithms, sensoric and vision based in-formation, construction and testing mechanical parts of unmanned vehicles. Scientists and researchers involved in mechanics, control algorithms, image processing, computer vision, data fusion, or IC will find this book useful.
