This book examines emerging theories, frameworks, and applications of global marketing for the 21st century. It highlights how global marketing is changing in a globalized and digital economy that is fast increasing in complexity and uncertainty. The traditional approach to global marketing is no longer sufficient to address the emerging issues in global markets. Global companies need to challenge traditional assumptions in global marketing in an era of shifting political, cultural, economic, and technological changes. They need to take a fresh look at the contemporary threats and opportunities in markets, institutions, and technology and how they affect entry and expansion strategies through careful re-calibration of the marketing-mix. This book offers new insights for global marketing that addresses these issues. This book should be an ideal resource to both academic scholars and reflective practitioners globally such as CEOs and chief marketing officers as well as government officials and policy makers interested in formulating strategies/policies for global marketing activities in the face of a globalized and digitized economy. This well-crafted research volume is an excellent addition to the growing literature on new trends in international marketing. The authors present the latest insight on the impact of phenomena such as cross-border e-commerce and digital markets, and they discuss new tools for political risk assessment, international branding and more broadly the reconfiguring of marketing-mix strategies – A powerful reminder that the new global market remains a rugged landscape. - Alain Verbeke, McCaig Research Chair in Management and Editor-in-Chief Journal of International Business Studies, University of Calgary, Canada. Emerging trends in institutions, markets, and societies, along with new technological advances, are redefining the scope and strategy in global marketing. Professors Agarwal and Wu have assembled a remarkable collection of cutting-edge topics and issues that capture the shifting paradigm and contemporary developments in the global marketing field. This is an informative and timely resource that makes a valuable contribution, useful for both scholars and business practitioners of global marketing. - Constantine S. Katsikeas, Arnold Ziff Endowed Research Chair in Marketing & International Management, Editor-in-Chief Journal of International Marketing, University of Leeds, UK. This book presents new and cutting-edge thinking at a time when the traditional views of international marketing need to be scrapped. Convergence forces are creating new opportunities as well as threats on a daily basis, and marketing practitioners as well as scholars must be forewarned as well as forearmed on how to deal with these changes. The real growth is coming from the emerging nations, and the theories that provided sufficient insights ten years ago have been completely outmoded by the ever-accelerating rate of innovation and technological change as well as the pressures to address the needs of all of the firm's relevant stakeholders. The strategic insights provided here are absolutely invaluable. Don't miss an opportunity to read this book!! - John B. Ford, Professor of Marketing & International Business, Eminent Scholar & Haislip-Rohrer Fellow, Editor-in-Chief, Journal of Advertising Research, Old Dominion University, USA. This book seeks to answer the questions: how do the rules of international treaties on trade and investment apply to the new laws and policies relating to energy-related trade, and do the rules of the multilateral system contribute to or detract from sustainable development? An emerging set of new problems in the law of international trade is how to reconcile the rules of the multilateral trading system with shortages of certain natural resources and the necessity to develop renewable energy resources. The chapters in this book provide a comprehensive analysis of the international trade issues presented by national trade laws and policies with regard to natural resources and energy. This book is about the extent to which we are interpreting existing rules to cover emerging problems and how the rules of the multilateral trading system can be adapted to achieve sustainable development in natural resources and energy. The book begins with a survey of selected national laws relating to recent restrictions on the export of natural resources, both resources used to produce energy as well as natural resources essential for industrial production. After examining the range of such laws in selected important countries, we turn to the application of the rules of the multilateral trading system to such export restrictions. We discuss the major rules of the World Trade Organization (WTO) as well as the natural resources rules in selected regional preferential free trade agreements. While there is not a comprehensive global legal regime on competition law, we believe it is also important to examine how selected national competition laws impact export restrictions on natural resources. This book will be a major contribution to the international dialogue on international economic law issues with respect to trade in natural resources and energy. Explore current social developments, issues, and controversies concerning young victims! The Victimization of Children: Emerging Issues keeps students and practitioners working with young victims on the cutting edge of the latest research developments regarding crimes against children. Leading experts from the legal, medical, and sociological communities explore some of the most urgent issues involving child victims. Researchers and practitioners in victim services, social work, mental health, public health, and criminal justice will all benefit from this useful resource. While numerous books have been written on the topic of child abuse and neglect, few delve into the more contemporary issues and problems. The Victimization of Children fills a large void in the literature by offering advanced discussions of today's most relevant topics, making this book an in-depth supplement to generic textbooks. Forward-thinking and thought-provoking, this timely resource provides sound research to expand your knowledge base. This book provides insights into such contemporary issues as: the victimization of youths on the Internet children as victims of war and terrorism spatial patterns of child maltreatment—the concentration of child maltreatment within certain geographical areas religion-related child abuse the role of health care professionals in response to child victimization children with disabilities—abuse, neglect, and the child welfare system fetal homicide—emerging statutory and judicial regulation of third-party assaults legal and social issues surrounding closed-circuit television testimony of child victims and witnesses juvenile courts and their role in addressing family violence The Victimization of Children provides tables, figures, and the latest statistics of various aspects of child victimization to complement the experts' contributions. This book offers new and different responses and interventions to meet the increasingly diverse contexts and situations within which child maltreatment occurs. Emerging trends are explored within this book from a cross-section of disciplines, including law, sociology, criminal justice, psychology, and health services. Maintaining the health and safety of workers in the United States and globally is accomplished in part by reducing hazardous exposures through the use of personal protective equipment. Personal protective technologies (PPT) include respirators worn by construction workers and miners; protective clothing, respirators, and gloves worn by firefighters and mine rescue workers; and respirators and protective clothing worn by healthcare workers. An estimated 5 million workers are required to wear respirators in 1.3 million U.S. workplaces. For some occupations, such as firefighting, the worker's protective equipment is the only form of protection against life-threatening hazards; for other workers, the PPT is a supplement to ventilation and other environmental, engineering, or administrative hazard controls. In the United States, federal responsibility for civilian worker PPT is integral to the mission of the National Institute for Occupational Safety and Health (NIOSH). This book examines the NIOSH Personal Protective Technology Program (PPT Program) and specifically focuses on the relevance and impact of this program in reducing hazardous exposures and improving worker health and safety. Focusing on current economic problems, Kerala's Economic Development: Emerging Issues and Challenges provides an in-depth analysis of the major development issues and challenges faced by the state. Kerala's development experience has attracted worldwide attention due to its paradoxical development: attaining higher quality of life of people on the one hand and continuation of the backward

productive sectors on the other. The state's economy remained backward in many respects and relied heavily on the remittance of Keralite emigrants. The implementation of liberalisation and globalisation policies since 1991 radically altered the growth process and Kerala achieved higher rates of investment and growth and greater technological change. These policies, however, have not only provided enormous opportunities, but also new challenges. This book examines the state's economic growth as well as the issues that have accompanied the policy changes. With a focus on five major regions globally (UK, US, Europe, Canada, and Australia) *Identifying and Managing Risk at Work* outlines key regional factors affecting risk and its management. This volume looks at the social production and social construction of risk as well as taking a labour-process approach and socio-political perspective to investigate the nature and causes of work-related risk. In addition, there are several issues included that contribute to identifying risk at work such as climate change, the "gig" economy and the "Me Too" movement. Readers will gain a picture of some of the major current issues that are affecting risk under globalisation. Drawing on these key aspects of risk, students, academics, practitioners, and policy-makers will gain a better understanding of how risk is conceptualised and identified, and of the roles of management and employees in dealing with risk. This book will be of interest to researchers and practitioners to help gain an understanding of risk for a number of regions, and how several current issues in globalisation can be seen in their risk context. Higher education has a vital role to play in the social and economic development of all countries. The sector, however, faces a significant number of critical issues to be addressed, major challenges to be met and overcome, and significant opportunities to be grasped and consolidated. Higher education institutions are now expected to operate, manage, compete, be creative and innovative, and provide intellectual leadership in a world characterized by increasingly rapid, pervasive and fundamental change. The question of how to maximize the performance of the higher education sector in the context of such an environment is the focus of the chapters in this book, which provide perspectives, analyses and examples relating to some of the major issues and challenges confronting higher education, both now and in the future. The information presented is drawn from recent research, as well as critical analyses of existing theory and practice. Authors are drawn from ten different countries: Australia; Brazil; Belgium; China; Israel; The Netherlands; Portugal; Turkey; the United Kingdom; and the USA. The topics addressed include: the role of higher education; government policy agendas; skills for the 21st Century; the role of higher education in addressing poverty; higher education and the labor market; the future of Brazilian higher education; higher education cost-sharing policy; the impact of political culture on higher education reform; accreditation; quality assurance; improving teaching and learning; promoting technology integration; creating inclusive higher education institutions; English for academic purposes; the relationship between learning style preference and academic disciplines; quality work-integrated learning; student learning in research-based doctorates; and developing emotional intelligence in higher education students. Scholars and adults in general have pondered for centuries the mysterious processes that influence the ways in which children gradually become adults. The development of professional organizations and journals devoted to adolescence, as well as increasing appreciation in academia and the world of policy for the importance of this phase of life, have helped this field catch up with the pace of research on other stages of human development particularly infancy and early childhood. The development of a comprehensive review of research on adolescence depends in large part on the perceived need for such a synthesis and the extent to which different research fields as well as policy and practice would benefit from such an effort. To address these issues, the National Research Council and the Institute of Medicine, through the Board on Children, Youth, and Families, held a two-day workshop in September 2005. The workshop was designed as an opportunity for an interdisciplinary group to explore the different strands of research that contribute to understanding adolescence. In the brief time available, the group was not asked to address the entire range of issues related to adolescent health and development, but rather to provide an initial explanation of issues that a longer term study might address. *A Study of Interactions* summarizes the major themes discussed at the workshop. It begins with an overview of what adolescence is and current views of the processes that shape development in the second decade of life. It explores the transdisciplinary research issues already presented in this field, as well as issues raised in discussions of goals for the field's future. A closing section describes the presenters' thoughts on the feasibility of launching an in depth contextual study that could more firmly establish connections among the many fields of study concerned with adolescence. This book presents relevant and timely endogenous procedures for addressing the challenge of transforming ideas into sustainable opportunities in Africa. It explores how Africa could be understood in the context of emerging global realities, providing alternative frameworks that will not just be participatory in conception and practice, but equally show a contextual workability for the varying aspects of the developmental enterprise in Africa. Despite having alternative and less cumbersome sources of funding, with commendable economic growth indices, and several economies among the fastest growing globally, African countries have been unable to transmute related opportunities into sustainable human development outcomes for majority of its citizenry. Over four rich sections the authors cover subjects ranging from environment and natural resource management, to governance, economy and sustainable development. The book continues with a section on Education and Human Development and a case study in transnationalism. The final section discusses crime, conflict and regional dynamics, including highly disputed topics such as forced migration and sex trade. This indispensable resource will be of great use to students and researchers globally in fields such as sociology, anthropology, environmental studies, politics and economics with a focus on contemporary Africa, as well as to policy planners and human rights activists invested in the future development of Africa. This book provides an archival forum for researchers, academics, practitioners and industry professionals interested and/or engaged in the reform of the ways of teaching and learning through advancing current learning environments towards smart learning environments. The contributions of this book are submitted to the International Conference on Smart Learning Environments (ICSLE 2014). The focus of this proceeding is on the interplay of pedagogy, technology and their fusion towards the advancement of smart learning environments. Various components of this interplay include but are not limited to: Pedagogy- learning paradigms, assessment paradigms, social factors, policy; Technology- emerging technologies, innovative uses of mature technologies, adoption, usability, standards and emerging/new technological paradigms (open educational resources, cloud computing, etc.) This new volume presents a selection of recent advances and emerging trends in food process engineering from several disciplines. Exploring the key concepts of food engineering, *Food Engineering: Emerging Issues, Modeling, and Applications* presents the information in four parts: Modeling in food engineering; Research advances in food engineering; Role of food engineering in human health; Emerging issues and applications in food engineering. Social networking focuses on social relationships (e.g., friendships) diagrammed as nodes (points) and links (ties or edges between points). Social network analysis (SNA) examines features of such relationships within a social networking system, including how such social interactions change over time. SNA can measure and map "connectedness" or "flow" (e.g., information, resources, etc.) within and across individuals, groups, and organizations. SNA can examine these ties in virtual- or geo-temporal spaces - yielding rich mixed methods possibilities and wide application to a host of scientific phenomena. The advent of social media established a cultural meme that carries social network concepts to broader public audiences, and that reinforces SNA's path to be a powerful interdisciplinary approach. Google Ngram viewer shows the use of "social network analysis" in the corpus of books burgeoned in the late 1960s, and has continued to grow exponentially since the 1990s. The conceptual and methodological reach now extends both widely - across scientific disciplines - and deeply -- as field advances arise with the rapid pace of new inquiries. Facing this tremendous promulgation and diversification of SNA, this book distills essential frontiers across fields. Introducing emerging issues in the application of social network theory and SNA, and how these can or will be addressed, each chapter illuminates new trends or applications of a social network approach that can have wide potential impact in other disciplines. Conceptual advances (e.g., applying the concepts of social networks such as peer influence on disease management and treatment adherence), as well as novel analytic approaches for studying properties of social networks are highlighted. This book constitutes a collection of articles that were written for, and recently published as, special sections in three consecutive issues of the *Journal of Personality Assessment*. Part I provides lucid commentaries on the current status of and future issues regarding the Rorschach and MMPI-2 and other instruments, including the Minnesota Multiphasic Personality Inventory -- Adolescent (MMPI-A), the Interpersonal Adjective Scales (IAS-R), the Inventory of Interpersonal Problems -- Circumplex version (IIP-C), the revised NEO Personality Inventory (NEO-PI-R), and the third edition of the Millon Clinical Multiaxial Inventory (MCMI-III). The authors not only participated in the development of the instruments, but continue to lead the research effort in their application in both clinical and research settings. Part II addresses several issues that have been recurring themes, and often topics of debate, in the research and professional literature. The contributors discuss the impact of the five-factor model on personality assessment, the issue of deception in personality assessment, and various critical issues in the measurement of mood states. Other articles focus on the integration of the MMPI-2 and Rorschach and the process that clinicians should follow when applying scientific knowledge to clinical practice. Part III is primarily devoted to overviews of several statistical methods that are employed infrequently in personality assessment research, but have great potential in contributing to the understanding of the complex data sets often encountered in the measurement and study of personality. These articles serve as both an introduction and a brief tutorial for personality researchers who are unfamiliar with the subject matter. They are valuable references that will form the basis for evaluating the appropriate use of these methods in published research in their areas of interest. Analyzing regional challenges and their implications for U.S. foreign policy This book is an impressive overview of security and governance issues in South Asia and their implications for U.S. foreign policy in the region. The focus is

on major enduring issues that include India-Pakistan relations, India-China relations, conventional forces, and nuclear weapons. The book's contributors also tackle a number of often underexplored issues, including democratic backsliding in India, authoritarian hardening in China, and the international ramifications of both. The impact of Pakistan's political culture on democracy, and the insurgency in Pakistan's Baluchistan province, along with examinations of the internal security challenges in Nepal, Bangladesh, and the Maldives provide lessons for other states on how to counterviolent extremism and insurgencies related to identity and marginalization. Anyone interested in South Asian security and U.S. policy toward the region will be rewarded with new insights on these topics, written by academics and analysts specializing in the issues. The chapter authors were close colleagues or advisees of long-time Brookings Institution senior fellow Stephen Philip Cohen. Cohen was the first American scholar to work on South Asian security studies. He largely defined the field, trained and mentored many of its leading analysts, and was himself its most experienced and insightful scholar-practitioner until his death in 2019. This book is dedicated to Cohen in recognition of his contributions to scholarship and policymaking on South Asia. This volume recognizes and addresses the health care issues of prisoners, to establish best practices and to learn about approaches to these challenges from around the world. It presents new evidence on several emerging and classical prison health issues. The first goal of this volume is to address emerging issues related to health in prison. Second, it presents the most recent research-based evidence and translates it to the practice. The third goal, is that it allows for sufficient diversity while also incorporating updates of some important already recognized prison health. The volume discusses prisons and the life and well-being of prisoners and staff, after growing problems as drug misuse (incl. tobacco smoking), infectious diseases (HIV/AIDS, hepatitis, STIs and TB), psychiatric problems, inadequate and unhealthy living conditions (incl. nutrition), overcrowding of prisons. These are addressed adequately in order to meet the international requirements of equivalence of health care. The scope of this volume is at the same type specific and diverse enough to cover the interests of a large audience that includes many types of practitioners involved in health-related issues in the field of prison health care, such as psychologists, nurses and prison administration officers responsible for health care, legal professionals and social workers. Management of Emerging Public Health Issues and Risks: Multidisciplinary Approaches to the Changing Environment addresses the threats facing the rapidly changing world and provides guidance on how to manage risks to population health. Unlike conventional and recognized risks (major, industrial, and natural), emerging risks are characterized by low or non-existent scientific knowledge, high levels of uncertainty, and different levels of acceptability by the relevant authorities and exposed populations. Emerging risk must be analyzed through multiple and crossed approaches identifying the phenomenon linked to the emergence of risk but also by combining scientific, policy and social data in order to provide more enlightened decision making. Management of Emerging Public Health Issues and Risks: Multidisciplinary Approaches to the Changing Environment provides examples of transdisciplinary approaches used to characterize, analyze, and manage emerging risks. This book will be useful for public health researchers, policy makers, and students as well as those working in emergency management, risk management, security, environmental health, nanomaterials, and food science. Presents emerging risks from the technological, environmental, health, and energy sectors, as well as their social impacts Contextualizes emerging risks as new threats, existing threats in new locations, and known issues, which are newly recognized as risks due to increased scientific knowledge Includes case studies from around the world to reinforce concepts This collection presents a comprehensive engagement of issues of human rights in an increasingly globalized world. As the role of the rule of law has moved beyond the confines of the state and beyond the interactions of states, how and when law protects human rights has become a central issue of concern. These essays shed light on both the immediate and the long-term future of a variety of issues located at the intersection of globalized law and the protection of the rights of individuals. Here both top-down mechanisms and bottom-up mechanisms for the fulfilment of human rights are artfully explained. This volume presents frontiers of research in human rights in both substance and approach using a variety of methodologies to engage issues ranging from national court compliance, norm diffusion, and the role of the judiciary in fulfilling human rights to human trafficking, same-sex marriage, and judicial institution building through non-governmental organizations. This book was published as a special issue of the Journal of Human Rights. This proceedings volume provides current research on emerging issues in business, economics and finance in the global economy with particular emphasis on Eastern Europe. Featuring selected papers from the 2017 International Economics Conference in Sibiu (IECS) organized by the Lucian Blaga University of Sibiu, Romania, the contributing chapters consider new business models, theories, practices and instruments from advanced and emerging economies in the context of recent global trends. After over 20 years of increasing openness and liberation of the world economy, recent events in regions such as Europe, USA and Asia have created challenges to the idea of globalization and integration. There is a delay between the real-world economic changes and the reflection of such changes in the economic research literature. The 2017 IECS conference and the enclosed papers aim to fill this gap in the study of globalization, covering diverse topics such as business administration, sustainability, corporate social responsibility, finance, accounting, tourism and business informatics. This volume is a comprehensive review of theoretical and empirical contributions to positive psychology. It provides a scientific understanding of how human strengths help people psychologically and physically, showing how stressful circumstances do not inexorably lead to negative prognoses. It examines how individuals confront challenges, appreciate others, and regard daily experiences as meaningful. Many of the chapters also challenge the negative, disease-model approach that dominates much of the research concerning health and well-being. Chapters also address applications and future directions for the field. The broad scope makes it a key resource for undergraduates, graduates, researchers, and practitioners in social, clinical, and positive psychology. The study of disability has traditionally been influenced mainly by medical and psychological models. The aim of this new text, Disability and Society, is to open up the debate by introducing alternative perspectives reflecting the increasing sociological interest in this important topic. Disability and Society brings together for the first time some of the most recent original research in this rapidly expanding area. The contributors, both disabled and non-disabled, are all leading thinkers in their field and suggest new ways of understanding disability, developing policy and challenging current practice. In recent times, developing countries across the world have focused on a market-driven approach to address their economic issues. While this has resulted in financial growth, it has also led to a spurt in systemic challenges in many nations. This volume explores the concerns faced by emerging economies from a present-day viewpoint, with in-depth analysis of key issues in economic development such as growth, market structure, poverty measurement, corruption, financial scams, voting behaviour, informal credit markets, and technology transfer, through the use of theoretical models. The chapters in this volume have been written in honour of Dipankar Dasgupta and Amitava Bose, two outstanding academicians and contributors to the field of economic theory. With contributions from leading theorists on topics ranging from democracy and development, to patent laws, and environmental concerns, this volume bridges the gap between empirical analysis and a theoretical understanding of emerging issues in economic development. "This book explores relevant practices, trends, and potential challenges facing fledgling governments in the digital era, focusing on the establishment and maintenance of e-government in various African countries"-- The first 50 years of ASEAN integration has brought peace and prosperity to the Southeast Asian region, while the next 50 will undoubtedly be fraught with unprecedented challenges. Today ASEAN not only has to contend with its own internal challenges arising from the highly diverse political, economic and socio-cultural systems of its member countries, it also has to deal with external factors which include shifts in geostrategic balance, fraying global consensus on free trade, populism and xenophobia, climate change, digital revolutions and cybercrimes. Set against the above background, this edited collection considers some of the contemporary issues and challenges faced by ASEAN in its journey towards more cohesive and dynamic regional integration. Among the topics explored are ASEAN's evolving partnerships with its key strategic partners including China and the United States on economic policies and strategies, educational systems and frameworks, migration and environmental threats. Integrating Performance Management and Enterprise Risk Management Systems offers a novel understanding of the multifaceted shades that surround the long called-for and yet not realised integration between performance management and enterprise risk management systems. Spanò and Zagaria depart from the idea that the main limitations so far refer to the jeopardization of extant contributions, the lack of a fully holistic perspective of analysis and interpretation, and the need to closely consider potential opportunities and threats in the current VUCA (volatile, uncertain, complex, and ambiguous) world - issues concerning ethical concerns and accountability pressures, power dynamics, social and sustainability implications, and technological impacts. Their study supports a substantive integration of performance management and enterprise risk management systems encompassing the current theoretical debates and the multiple practical and policy interventions, highlighting overlaps and gaps, and fostering a more systematic approach towards the embeddedness of unified routines and behaviours. The authors suggest looking at performance management and enterprise risk management systems as logics rather than functions, as languages rather than tools, and devoting major attention to soft variables in addition to hard ones, towards a novel comprehension of timely dynamics paramount for academics, practitioners and policy makers. Hispanics are defined as people of Spanish-speaking origin from Latin America, the Caribbean, or Europe. Hispanics vary in terms of socioeconomic status, race, religion and/or more. A common occurrence among the Hispanics, however, are the emerging issues concerning their health. It is estimated that by 2050 Hispanics will make up more than 25% of the United States' population. It is thus important that they have the resources to contribute maximally to American society. This can come about by first understanding and dealing with issues surrounding their health. In hopes of examining these issues and as a part of its continuing commitment to promote a

national dialogue on race and diversity in the United States, the National Academies organized an expert meeting on Emerging Issues in Hispanic Health on April 10, 2002. Emerging Issues in Hispanic Health: Summary of a Workshop includes a review of key demographic data, such as population statistics, that characterize the Hispanic population in the United States; research on the socioeconomic, sociocultural, and behavioral determinants of health; effects of selective migration; the apparent epidemiological paradox: the relatively positive health outcomes observed in some Hispanic populations despite their relatively poor socioeconomic status or other types of disadvantage such as discrimination; and more. This sixth volume in the Academy of International Business Series presents leading-edge research on contemporary themes in international business. Part one explores several of the major issues that currently face multinational enterprises: government policy, the Asia crisis, knowledge and technology management, corporate-subsidiary relations, strategies for small firms and the impact of the technological revolution. Part Two of the volume examines the impact of foreign direct investment, FDI. Written by a range of international contributors, a key focus of these papers is the particular issues relating to foreign investment in the emerging markets of Central and Eastern Europe and South-East Asia. 'It is an extremely thought-provoking book, crammed full of excellent papers which are genuinely original, and push forward the boundaries of their retrospective topics. . . the book is without doubt worth purchasing for anyone interested in IP theory, pharmaceuticals or traditional knowledge. . . the papers are of incredibly good quality. . . a few of those alone make the book worth purchasing. My impromptu rating system will therefore award it 5 out of 5 stars.' - James Griffin, Communications Law

This book collects the papers presented at the 6th International Conference on Risk Analysis and Crisis Response (RACR-2017) held in Ostrava/Prague, Czech Republic, on June 5-9, 2017, organized by VSB-Technical University of Ostrava, Czech Republic. The overall theme of the sixth international conference on risk analysis and crisis response is Risk Analysis and Management - Trends, Challenges and Emerging Issues, highlighting science and technology to improve risk analysis capabilities and to optimize crisis response strategy. This book contains primarily research articles of risk issues. Underlying topics include natural hazards and major (chemical) accidents prevention, disaster risk reduction and society resilience, information and communication technologies safety and cybersecurity, modern trends in crisis management, energy and resources security, critical infrastructure, nanotechnology safety and others. All topics include aspects of multidisciplinary and complexity of safety in education and research. The book should be valuable to professors, engineers, officials, businessmen and graduate students in risk analysis and risk management. About the book series

Communications in Cybernetics, Systems Science and Engineering - Proceedings (CCSSEP) is a cross-disciplinary book series devoted to theoretical and applied research contributions, that cater to a rapidly growing worldwide interest in a cybernetic and systemic methodology with an ever-increasing capacity to deal with new challenges in a way that traditional science cannot. The series aims to become a comprehensive reference work on and guide to developments within the field and strategies required for better implementation of advances, with a view to environmental protection and sustainable social and economic development. The CCSSE series targets all working in theoretical and applied fields of cybernetics, systems science and engineering, e.g. academics, researchers and consultants, computer and information scientists, development and systems engineers, mathematicians, management cyberneticists and systemists, medical scientists, and intelligent and manufacturing engineers in industry, as well as leading decision- and policy-makers. Series editor: Jeffrey 'Yi-Lin' Forrest

This volume is being published at a critical time in U.S. history and serves as a comprehensive and much-needed update to what is known about Latinx health. As both the United States and Latinx subgroups experience demographic shifts, it is critical to examine the current epidemiology of Latinx health, as well as the factors influencing the health and well-being of this growing population. Chapters in this book, written by highly respected experts, illuminate the diversity of the Latinx population and provide strategies to mitigate many of the challenges they face, including challenges related to migrating to new destinations. The book is designed to enrich dialogue around the multilevel determinants of Latinx health and concludes with a call to action for increased culturally congruent, theoretically informed and participatory Latinx health research. The book also encourages the mentorship and growth of early career and junior investigators to conduct research on Latinx health issues. A selection of the perspectives included among the chapters: Chronic disease and mental health issues in Latinx populations Substance use among Latinx adolescents in the United States Physical and intellectual and developmental disabilities in Latinx populations Health insurance reform and the Latinx population Immigration enforcement policies and Latinx health Research priorities for Latinx sexual and gender minorities Racial and ethnic discrimination, intersectionality, acculturation, and Latinx health New and Emerging Issues in Latinx Health is an invaluable compendium that provides a foundation of understanding Latinx health and well-being and guides future research and practice. The book is essential for researchers, practitioners, and students in the fields of public health and the social sciences including community and health psychology, health administration and policy, community health education, medical anthropology, medical sociology, population health, and preventive medicine. Moreover, the chapters in this volume are also relevant for federal, state, and local agencies, including health departments, and other Latinx- and immigrant-serving community organizations.

Rethinking Global Political Economy contains incisive analysis of history, linguistics, class, culture, empirical data and normative concerns. This important volume presents innovative approaches to fundamental issues in global political economy. Together they provide multiple arguments and avenues for rethinking global political economy in a time of turmoil and system transformation. It will appeal to those interested in seeing new perspectives and healthy heterodoxy in the study of political economy. This book is a compilation of papers published in International Journal of Innovation and Technology Management. The chapters in the book focus on recent developments in the field of innovation and technology management. Carefully selected on the basis of relevance, rigor and research, the chapters in the book take the readers through various emerging topics and trends in the field. Written in a simple and accessible manner, the chapters in this book will be of interest to academics, practitioners and general public interested in knowing about emerging trends in innovation and technology management. Technology-based innovations fuel the knowledge-based economy, as it creates new industries, makes existing ones globally competitive, and drives future economic growth. In order to reach technology-based economic growth, it is not only necessary to invest capital, intellect and time in technology-related research and development (R and D), but also to execute processes related to technology development trends, diffusion patterns, and the adoption and implementation of technology-based innovations. Nanotechnology has contributed to remarkable advances in the field of science and technology in the past two decades, which have led to significant prospective applications in various technological domains including advanced materials, biotechnology and pharmacy, electronics, scientific tools and techniques, and industrial manufacturing processes. This ultra-small technology will drive a new technology-driven global economy, with revolutionary advances in almost all industry sectors through high utility and demands.

Food Safety: Emerging Issues, Technologies and Systems offers a systems approach to learning how to understand and address some of the major complex issues that have emerged in the food industry. The book is broad in coverage and provides a practical understanding in food safety initiatives and safety rules, how to deal with whole-chain traceability issues, handling complex computer systems and data, foodborne pathogen detection, production and processing compliance issues, safety education, and more. Recent scientific industry developments are written by experts in the field and explained in a manner to improve awareness, education and communication of these issues. Examines effective control measures and molecular techniques for understanding specific pathogens Presents GFSI implementation concepts and issues to aid in implementation Demonstrates how operation processes can achieve a specific level of microbial reduction in food Offers tools for validating microbial data collected during processing to reduce or eliminate microorganisms in foods Economics is about understanding the rational behaviour of economic agents (households, firms, industries and government) in their decisions to achieve best outcomes of their goals and aspirations. They collectively converge to achieve the utmost economic and social benefits for all in the country in terms of economic growth and development. Economic growth and development occur through efficient use of available resources to meet effective demand and social needs. The challenge that countries are facing is proper application of appropriate policy mix to optimize the opportunities of increasingly interdependent global economic landscape. For emerging economies, a multiple sector strategy that propels economic transformation is crucial. This needs to be predicated on robust macroeconomic policy framework that aligns with global production and consumption activities to drive economic growth process for achieving sustainable development. Emerging Trade Issues for Small Developing Countries seeks to help Commonwealth developing countries adapt to emerging trade issues such as climate change, e-commerce, implementation of the SDGs, and the role of Micro, Small and Medium-sized enterprises and GVCs . It addresses systemic issues that impact on the participation in the multilateral trading system and WTO negotiations. Adopting a multi-disciplinary and comparative approach, this book focuses on the emerging and innovative aspects of attempts to target the accumulated assets of those engaged in criminal and terrorist activity, organized crime and corruption. With contributions from leading international academics and practitioners in the fields of law, economics, financial management, criminology, sociology and political science, the book explores law and practice in countries with significant problems and experiences, revealing new insights into these dilemmas. It also discusses the impact of the 'follow-the-money' approach on human rights while also assessing effectiveness. As classrooms across the globe become increasingly more diverse, it is imperative that educators understand how to meet the needs of students with varying demographic backgrounds. Emerging Issues and Trends in Education presents case studies from academics who have all at one point been teachers in K-12 classrooms, addressing topics such as STEM as well as global issues related to race, gender education, education policy, and parental engagement. The contributors take an

international approach, including research about Nigerian, Chinese, Native American, and Mexican American classrooms. With a focus on multidisciplinary perspectives, Emerging Issues and Trends in Education is reflective of the need to embrace different ways of looking at problems to improve education for all students.
