The old saying goes, "'To the man with a hammer, everything looks like a nail.'" But anyone who has done any kind of project knows a hammer often isn't enough. The more tools you have at your disposal, the more likely you'll use the right tool for the job - and get it done right. The same is true when it comes to your thinking. The quality of your outcomes depends on the mental models in your head. And most people are going through life with little more than a hammer. Until now. **The Great Mental Models: General Thinking Concepts** is the first book in The Great Mental Models series designed to upgrade your thinking with the best, most useful and powerful tools so you always have the right one on hand. This volume details

nine of the most versatile, all-purpose mental models you can use right away to improve your decision making, productivity, and how clearly you see the world. You will discover what forces govern the universe and how to focus your efforts so you can harness them to your advantage, rather than fight with them or worse yet- ignore them. Upgrade your mental toolbox and get the first volume today. AUTHOR BIOGRAPHY Farnam Street (FS) is one of the world's fastest growing websites, dedicated to helping our readers master the best of what other people have already figured out. Drawn from the US National Science Foundation's Symposium on Next Generation of Data Mining and Cyber-Enabled Discovery for Innovation (NGDM 07), Next Generation of Data Mining explores emerging technologies and applications in data mining as well as potential challenges faced by the field. Gathering perspectives from top experts across different disciplines, the book debates upcoming challenges and outlines computational methods. The contributors look at how ecology, astronomy, social science, medicine, finance, and more can benefit from the next generation of data mining techniques. They examine the algorithms, middleware, infrastructure, and privacy

policies associated with ubiquitous, distributed, and high performance data mining. They also discuss the impact of new technologies, such as the semantic web, on data mining and provide recommendations for privacy-preserving mechanisms. The dramatic increase in the availability of massive, complex data from various sources is creating computing, storage, communication, and human-computer interaction challenges for data mining. Providing a framework to better understand these fundamental issues, this volume surveys promising approaches to data mining problems that span an array of disciplines.

Social media is popularly seen as an important media for people with disability in terms of communication, exchange and activism. These sites potentially increase both employment and leisure opportunities for one of the most traditionally isolated groups in society. However, the offline inaccessible environment has, to a certain degree, been replicated online and particularly in social networking sites. Social media is becoming an increasingly important part of our lives yet the impact on people with disabilities has gone largely unscrutinised. Similarly,

while social media and disability are often both observed through a focus on the Western, developed and English-speaking world, different global perspectives are often overlooked. This collection explores the opportunities and challenges social media represents for the social inclusion of people with disabilities from a variety of different global perspectives that include Africa, Arabia and Asia along with European, American and Australasian perspectives and experiences. An Acquaintance recently asked me if I would help her begin a blog. Her request inspired me to look at what I have acquired from operating my own blog for the past two years. My initial proposition was to spend awhile learning and reading. The World Wide Web is flooded with blogging data and advice. I am not the man to aid you in returning immense numbers overnight, but this data is all over. I am also not the source for technical points; I acknowledge what I ought to know for my situation, and I determine more as I require it. I assume I am like most individuals who release material on the Internet. I classify myself as a small-but-serious blogger. I am also a big-time consumer of material and media. I follow many blogs in several niches, both

for material and to learn what works. So based on my experience, what should I tell my acquaintance that'll get her set out without consuming her? Here is where I began. For me, blogging is basically a relationship. Two crucial components of any relationship are intent and association. Choose what you want to achieve. You are able to find dozens of high-quality direction about every aspect of arranging and controlling your blog, but none of it is one-size-fits-all. Each choice—design, program, post length, style—depends on the ending goal you have. Conclusions that do not seem like a big deal now may become crucial later. For instance, self-hosting with your own domain may feel like an unneeded expense, but it is crucial if your goal is to construct a personal brand or a business around your web site..... How do we practice journalism in a digital world, in which the old 'rules' no longer apply? This text offers comprehensive, instructive coverage of the techniques and secrets of being a successful online journalist, both from a theoretical and practical point of view. Reflecting the vitality of the web, it will inspire you to acquire new skills and make sense of a transforming industry. Key

Features: How to investigate and break stories online Learn to broadcast to millions using video and podcast How to blog like a pro Learn to manage and stimulate user-generated content Include and use social media in your toolkit How to dig out stories using data journalism Rise to the challenge of citizen journalism Make your journalism more interactive at every stage of the process Dedicated chapter for Law and Online Communication The Online Journalism Handbook is essential reading for all journalism students and professionals and of key interest to media, communication studies and more broadly the social sciences. There has truly never been a better time to be an author. For the first time, authors have direct access to their readers via the Internet. They can create a community of fans who are eagerly awaiting (and talking to their friends about) their next book. But where should authors start? How should they sort through the dizzying range of online options? Where is it most worth spending time; what is a 'must do' and what is a 'might do'? Enter Fauzia Burke, a digital book marketing pioneer and friend of overwhelmed writers everywhere. She not only makes the job of building an online brand

doable but proves that it can be fun and fulfilling, too. Burke takes authors step by step through the process of identifying their unique personal brand, defining their audience, clarifying their aspirations and goals, and setting priorities. Once that foundation is established, she walks them through the process of developing a personalized, sustainable long-term online marketing plan. She offers advice on designing a successful website, building a mailing list of superfans, blogging, creating an engagement strategy for social media, and more. 'Once you build your brand,' Burke writes, 'no one can take it away from you.' An author's digital brand is a conversation about their book that builds their community one relationship at a time. By following Burke's expert advice, any author can conquer the Internet and still get his or her next manuscript in on time. The World Wide Web constitutes the largest existing source of texts written in a great variety of languages. A feasible and sound way of exploiting this data for linguistic research is to compile a static corpus for a given language. There are several advantages of this approach: (i) Working with such corpora obviates the problems

encountered when using Internet search engines in quantitative linguistic research (such as non-transparent ranking algorithms). (ii) Creating a corpus from web data is virtually free. (iii) The size of corpora compiled from the WWW may exceed by several orders of magnitudes the size of language resources offered elsewhere. (iv) The data is locally available to the user, and it can be linguistically post-processed and queried with the tools preferred by her/him. This book addresses the main practical tasks in the creation of web corpora up to giga-token size. Among these tasks are the sampling process (i.e., web crawling) and the usual cleanups including boilerplate removal and removal of duplicated content. Linguistic processing and problems with linguistic processing coming from the different kinds of noise in web corpora are also covered. Finally, the authors show how web corpora can be evaluated and compared to other corpora (such as traditionally compiled corpora). For additional material please visit the companion website:

/ Linguistic Processing / Corpus Evaluation and Comparison / Bibliography / Authors' Biographies This book is a collection of quotes from letters that was selected from the books I personally read, and republished on my blog from July 2017 to March 2021. This book contains selected Computer, Management, Information and Educational Engineering related papers from the 2014 International Conference on Management, Information and Educational Engineering (MIEE 2014) which was held in Xiamen, China on November 22-23, 2014. The conference aimed to provide a platform for researchers, engineers and academic "If Ballard invited the twentieth-century viewer to witness their own mass atrocity exhibition, we now have the update for the twenty-first century: Jodi Dean's demolition job of the internet as we know it. With Blog Theory we can finally terminate the hype of blogging and seriously engage the deeply distracted condition of the networked present." Geert Lovink, Institute of Network Cultures, Amsterdam "Blog Theory is refreshingly free of received ideas about the wonderful new world of media. Jodi Dean manages the difficult art of being critical of new media without becoming a cranky curmudgeon. She

clears the way for imagining the politics of media by other means." McKenzie Wark, *The New School University* "What happens to politics when there is no one in charge? The answer Jodi Dean gives, in this coruscating, rock 'n' roll ride through new political and media theory, is communicative capitalism - the obligation to communicate in a world turned into a market for communications. Dean's radical call for a new media politics will challenge political scientists, communication theorists, and media activists to sever the ties, and create an unforeseeable, dramatically material future." Sean Cubitt, *University of Melbourne Blog Theory* develops a critical theory of contemporary media. Advancing her account of communicative capitalism, Jodi Dean explores how new media practices like blogging, friending, and texting capture their users in networks of enjoyment, production, and surveillance. Her wide-ranging and theoretically rich analysis extends from her personal experiences as a blogger, through media histories, to newly emerging social network platforms and applications. Dean details the ways networked media undermine oppositional politics by inducing users to highlight

communication and awareness and neglect organization and revolt. Set against the background of the economic crisis wrought by neoliberalism, the book defends the provocative thesis that complex networks are best understood via the psychoanalytic notion of the drives. The "newness" of new media is less a matter of technology than of the capture of political energies in ever-intensifying circuits of exploitation and submission. Dean contends that reading networks in terms of the drives reveals their real, human dimension in the feelings and affects that make our submission automatic, obvious, and fun. A polemic against Web 2.0 and participatory media fantasies, *Blog Theory* exposes our underlying entrapment in the media net. This collection of original essays addresses a number of questions seeking to increase our understanding of the role of blogs in the contemporary media landscape. It takes a provocative look at how blogs are reshaping culture, media, and politics while offering multiple theoretical perspectives and methodological approaches to the study. Americans are increasingly turning to blogs for news, information, and entertainment. But what is the content of blogs? Who writes them? What is the consequence of the

population's growing dependence on blogs for political information? What are the effects of blogging? Do readers trust blogs as credible sources of information? The volume includes quantitative and qualitative studies of the blogosphere, its contents, its authors, and its networked connections. The readers of blogs are another focus of the collection: how are blog readers different from the rest of the population? What consequences do blogs have for the lives of everyday people? Finally, the book explores the ramifications of the blog phenomenon on the future of traditional media: television, newspapers, and radio.

What role LMS users' profiles play in facilitating change in practice? Can we model users' quality of interaction (QoI) with LMS? How inclusiveness and affectiveness could lead to a personalized intelligent LMS (iLMS)? If these questions sound intrinsic to you and to your own experience and circumstance, then this book fits absolutely to you. Here, the term Blended - viewed as a fuzzy concept - is understood as a stepping-stone on the way to the future, to explain the multiple ways human beings think/act/feel of society in the 21st century and to embrace the opportunity of humans to re/co-construct new knowledge through the intermediation role of the technology. Initially, based on an online learning environment' theoretical framework, some current issues of the educational processes in the digital age of Web 2.0 are analyzed. Then, after exploring the main methodological procedures, characteristic examples of research case studies follow, including LMS users' trends and profiles and modeling of their QoI using

fuzzy logic. This book offers useful information that evokes initiatives towards rethinking of the value, efficiency, inclusiveness, affectiveness and personalization of the iLMS-based b-learning environment, both by the educators, the LMS designers and educational policy decision makers. chain environment, and have become increasingly popular over the last 15 years. In recent years, more and more enterprises world-wide have adopted EIS such as Enterprise Resource Planning (ERP) for running their businesses. Previously, information systems such as CAD, CAM, MRPII and CRM were widely used for partial functional integration within a business organization. With global operation, global supply chain, and fierce competition in place, there is a need for suitable EIS such as ERP, E-Business or E-Commerce systems to integrate extended enterprises in a supply chain environment with the objective of achieving efficiency, competency, and competitiveness. As a result, there is a growing demand for researching EIS to provide insights into challenges, issues, and solutions related to the design, implementation and management of EIS. The papers in Advances in Enterprise Information Systems were selected from two premier international conferences: the International Forum of Information Systems Frontiers—Xian International Symposium (IFISF), June 29–30, 2006, Xian, China and the IFIP TC 8.9 International Conference on Research and Practical Issues of Enterprise Information

Systems (Confenis 2007), October 14-16, Beijing, China. Both events provided an excellent opportunity for EIS academicians and practitioners in the world to gather and exchange ideas, and present original research in their fields. Advances in Enterprise Information Systems will be invaluable to scientists, researchers and professionals in EIS.
