better, and science and technology are the driving forces that will help make it better.

Placing Children in Special Education Dec 02 2019 The document contains the final report of a project to determine the factors that account for disproportionate representation of minority students in special education programs, especially programs for mentally retarded students; and to identify placement criteria for practices that do not affect minority students disproportionately. Chapter 1 looks at six potential causes of disproportionate placement of minorities in educable mentally retarded (EMR) programs: legal and administrative requirements, characteristics of students, quality of the instruction received, possible biases in the assessment process, characteristics of the home and family environment, and broader historical and cultural contexts. Chapter 2 describes characteristics of EMR students, then reviews the historical origins of special education in America with attention to the role of the standardized intelligence test for identification and placement of mentally retarded students. A third chapter is split into two sections--one on the issues surrounding the instruments that comprise a comprehensive battery for assessing a child who is unable to learn normally in the classroom, and the other on an ideal assessment process in which the comprehensive assessment would be embedded. Chapter 4 considers the components of effective education programs for EMR students and reviews three approaches to instruction (the separate class structure, the resource room, and the teacher consultant model). A final chapter lists recommendations for improvements in special education referral, assessment, and placement procedures and instructional practices. More than half the document is comprised of six background papers with the following titles and authors: "Biological and Social Factors Contributing to Mild Mental Retardation" (J. Shonkoff); "Classifying Mentally Retarded Students--A Review of Placement Practices in Special Education" (W. Bickel); "Testing in Educational Placement--Issues and Evidence" (J. Travers); "Effects of Special Education Placement on Educable Mentally Retarded Children" (K. Heller); "Some Potential Incentives of Special Education Funding Practices" (S. Magnetti); and "Patterns in Special Education Placement as Revealed by the OCR Survey" (J. Finn). (SB)

International Classification of Diseases for Oncology Jul 01 2022 This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The

first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

Corrosion Science: Modern Trends and Applications Mar 29 2022 The advent of Industry 4.0 has opened a data-rich avenue of predicting and controlling premature degradation of industrial materials. For any industrial construction or manufacturing projects, performing analysis on the

structural integrity of materials is crucial for their sustainability. *Corrosion Science: Modern Trends and Applications* gives scholars a snapshot of recent contributions and development in the field of material corrosion. The book presents 12 chapters that cover topics such as corrosion testing methods, anti-corrosive coating mechanisms, corrosion in different types of products (electronics, polymers), industrial systems (power plants, concrete constructions, and hydraulic systems), and corrosion as a result of environmental characteristics (such as marine surroundings). The breadth of topics covered coupled with the reader-friendly presentation of the book make it highly beneficial for students, research scholars, faculty members, and R&D specialists working in the area of corrosion science, material science, solid-state science, chemical engineering, and nanotechnology. Readers will be equipped with the knowledge to understand and plan industrial processes that involve measuring the reliability and integrity of material structures which are impacted by corrosive factors.
