The Poetry Home Repair Manual Dec 11 2020 Recently appointed as the new U. S. Poet Laureate, Ted Kooser has been writing and publishing poetry for more than forty years. In the pages of The Poetry Home Repair Manual, Kooser brings those decades of experience to bear. Here are tools and insights, the instructions (and warnings against instructions) that poets— aspiring or practicing— can use to hone their craft, perhaps into art. Using examples from his own rich literary oeuvre and from the work of a number of successful contemporary poets, the author schools us in the critical relationship between poet and reader, which is fundamental to what Kooser believes is poetry's ultimate purpose: to reach other people and touch their hearts. Much more than a guidebook to writing and revising poems, this manual has all the comforts and merits of a long and enlightening conversation with a wise and patient old friend—a friend who is willing to share everything he's learned about the art he's spent a lifetime learning to execute so well.

**Plant Development and Organogenesis** Oct 21 2021 The way plants grow and develop organs

significantly impacts the overall performance and yield of crop plants. The basic knowledge now available in plant development has the potential to help breeders in generating plants with defined architectural features to improve productivity. Plant translational research effort has steadily increased over the last decade due to the huge increase in the availability of crop genomic resources and Arabidopsis-based sequence annotation systems. However, a consistent gap between fundamental and applied science has yet to be filled. One critical point often brought up is the unreadiness of developmental biologists on one side to foresee agricultural applications for their discoveries, and of the breeders to exploit gene function studies to apply to candidate gene approaches when advantageous on the other. In this book, both developmental biologists and breeders make a special effort to reconcile research on the basic principles of plant development and organogenesis with its applications to crop production and genetic improvement. Fundamental and applied science contributions intertwine and chase each other, giving the reader different but complementary perspectives from only apparently distant corners of the same world.

**One Line a Day Three Year Parenting Memory Journal** Nov 09 2020 Capture the small everyday moments that make up our lives with this easy, accessible one line a day journal. There is enough writing space to jot down a single word, a line or phrase summing up your day, but not so much space that it might be overwhelming to those who don't have a lot of time on their hands - that includes all parents and caregivers, surely! Great gift idea for... busy parents who would love to preserve all the adorable things their kids say and do, milestones arrived at etc. It then becomes a beautiful gift to pass on to those children later on. those who would love to commit to

a daily journaling practice journaling newbies to exercise their beginner journaling muscles lapsed journalers who would love to get back in the writing habit, but are going through a particularly busy season of life. people who like the idea of keeping a diary, but haven't found one that works for them - until now! Take five minutes a day - could be less than one minute on busy days - to form a snapshot of your life. Consider your time investment writing in this microjournal as an exercise in self-care, because later you will be able to reward yourself by revisiting those precious life moments. Reading a funny thing your child said, for example, is enough to bring back a flood of memories when you look back and reminisce years later. Once you're in the habit of looking out for the daily memory you want to record, you'll find that jotting down those life highlights becomes easier and easier as time goes on. Entries dated for January 1st 2020 to December 31st 2022 2 days per page allows this memory journal to be an easily portable size Clear layout This journal makes a thoughtful gift for family, friends, and coworkers this holiday season. As the entries grow, this memory journal will become a priceless heirloom to treasure for years to come. Watch out for those those heartwarming bursts of nostalgia! Happy holidays to you and yours!

Court Patronage and Corruption in Early Stuart England Nov 21 2021 This wide-ranging volume goes to the heart of the revisionist debate about the crisis of government that led to the English Civil War. The author tackles questions about the patronage that structured early modern society, arguing that the increase in royal bounty in the early seventeenth century redefined the corrupt practices that characterized early modern administration.

**Stromal Cells** Aug 07 2020 Stromal cells are connective tissue cells of any organ, and they

support the function of the parenchymal cells of that particular organ. Stromal/stromal stem cells are fundamentally a heterogeneous population of cells with contradictory differentiation potential depending upon their environmental niche. Stromal cell biology is not only intriguing, but equally stromal cell ontogeny in vivo remains challenging. In recent years there has been substantial advances in our understanding of stromal cell biology, especially stromal cell isolation, characterization, differentiation, and interactions in physiological (epithelial-stromal interactions) as well as pathophysiological (stromal-cancer interactions) contexts. In addition, stromal cells are also utilized more and more as a therapeutic tool not only in the field of gene therapy but also in the translational field of tissue engineering and regenerative medicine. Therefore, the goal of this book is to consolidate the recent advances in the area of stromal/stromal stem cell biology covering a broad range of interrelated topics in a timely fashion and to disseminate that knowledge in a lucid way to a greater scientific audience. This book will prove highly useful for students, researchers, and clinicians in stem cell biology, developmental biology, cancer biology, pathology, oncology, as well as tissue engineering and regenerative medicine. This quick reference will benefit anyone desiring a thorough overview of stromal cell structure, function, and its therapeutic implications.

**The Highlanders** Oct 09 2020 Nineteenth Century Collections Online: European Literature, 1790-1840: The Corvey Collection includes the full-text of more than 9,500 English, French and German titles. The collection is sourced from the remarkable library of Victor Amadeus, whose Castle Corvey collection was one of the most spectacular discoveries of the late 1970s. The Corvey Collection comprises one of the most important collections of Romantic era writing in

existence anywhere -- including fiction, short prose, dramatic works, poetry, and more -- with a focus on especially difficult-to-find works by lesser-known, historically neglected writers. The Corvey library was built during the last half of the 19th century by Victor and his wife Elise, both bibliophiles with varied interests. The collection thus contains everything from novels and short stories to belles lettres and more populist works, and includes many exceedingly rare works not available in any other collection from the period. These invaluable, sometimes previously unknown works are of particular interest to scholars and researchers. European Literature, 1790-1840: The Corvey Collection includes: \* Novels and Gothic Novels \* Short Stories \* Belles-Lettres \* Short Prose Forms \* Dramatic Works \* Poetry \* Anthologies \* And more Selected with the guidance of an international team of expert advisors, these primary sources are invaluable for a wide range of academic disciplines and areas of study, providing never before possible research opportunities for one of the most studied historical periods. *Agrobacterium: From Biology to Biotechnology* Mar 14 2021 *Agrobacterium* is a plant pathogen which causes the “crown-gall” disease, a neoplastic growth that results from the transfer of a well-defined DNA segment (“transferred DNA”, or “T-DNA”) from the bacterial Ti (tumor-inducing) plasmid to the host cell, its integration into the host genome, and the expression of

oncogenes contained on the T-DNA. The molecular machinery, needed for T-DNA generation and transport into the host cell and encoded by a series of chromosomal (chv) and Ti-plasmid virulence (vir) genes, has been the subject of numerous studies over the past several decades. Today, Agrobacterium is the tool of choice for plant genetic engineering with an ever expanding host range that includes many commercially important crops, flowers, and tree species. Furthermore, its recent application for the genetic transformation of non-plant species, from yeast to cultivated mushrooms and even to human cells, promises this bacterium a unique place in the future of biotechnological applications. The book is a comprehensive volume describing Agrobacterium's biology, interactions with host species, and uses for genetic engineering.

**Methodologies and Results in Grapevine Research** Sep 19 2021 Grapevine is a crop of major economical interest, and wine represents a multicultural heritage which has been growing since several milleniums. Yet, modern viticulture must face several challenges. Global climate has increased berry sugar content (and alcohol in the wine) whereas phenolic and aromatic ripeness are not always achieved. Water supply is becoming shorter. New varieties better adapted to new climatic conditions might have to be planted, which may affect wine typicity. Phytochemical treatments are more controlled, and the consumer pays increasing attention to environmentally

safe practices. New methods reducing pesticide use, but maintaining yield and typicity, must be designed. The present book illustrates the recent progress made in ecophysiology, molecular and cell biology, and pathology of grapevine, as well as in precision viticulture and berry composition. Combination of these new tools with field observations will undoubtedly make it easier to face the challenges described above. These multidisciplinary contributions will be of interest to anyone involved in grapevine and wine activities.

*Automating Inequality* Aug 19 2021 WINNER: The 2018 McGannon Center Book Prize and shortlisted for the Goddard Riverside Stephan Russo Book Prize for Social Justice The New York Times Book Review: "Riveting." Naomi Klein: "This book is downright scary." Ethan Zuckerman, MIT: "Should be required reading." Dorothy Roberts, author of *Killing the Black Body*: "A must-read." Astra Taylor, author of *The People's Platform*: "The single most important book about technology you will read this year." Cory Doctorow: "Indispensable." A powerful investigative look at data-based discrimination—and how technology affects civil and human rights and economic equity The State of Indiana denies one million applications for healthcare, foodstamps and cash benefits in three years—because a new computer system interprets any mistake as “failure to cooperate.” In Los Angeles, an algorithm calculates the comparative vulnerability of tens of thousands of homeless people in order to prioritize them for an inadequate pool of housing resources. In Pittsburgh, a child welfare agency uses a statistical

model to try to predict which children might be future victims of abuse or neglect. Since the dawn of the digital age, decision-making in finance, employment, politics, health and human services has undergone revolutionary change. Today, automated systems—rather than humans—control which neighborhoods get policed, which families attain needed resources, and who is investigated for fraud. While we all live under this new regime of data, the most invasive and punitive systems are aimed at the poor. In *Automating Inequality*, Virginia Eubanks systematically investigates the impacts of data mining, policy algorithms, and predictive risk models on poor and working-class people in America. The book is full of heart-wrenching and eye-opening stories, from a woman in Indiana whose benefits are literally cut off as she lays dying to a family in Pennsylvania in daily fear of losing their daughter because they fit a certain statistical profile. The U.S. has always used its most cutting-edge science and technology to contain, investigate, discipline and punish the destitute. Like the county poorhouse and scientific charity before them, digital tracking and automated decision-making hide poverty from the middle-class public and give the nation the ethical distance it needs to make inhumane choices: which families get food and which starve, who has housing and who remains homeless, and which families are broken up by the state. In the process, they weaken democracy and betray our most cherished national values. This deeply researched and passionate book could not be more timely.

**Dual Specificity Phosphatases** Apr 26 2022 Dual specificity phosphatases (DUSPs) constitute a heterogeneous group of protein tyrosine phosphatases with the ability to dephosphorylate Ser/Thr and Tyr residues from proteins, as well as from other non-proteinaceous substrates including signaling lipids. DUSPs include, among others, MAP kinase (MAPK) phosphatases (MKPs) and small-size atypical DUSPs. MKPs are enzymes specialized in regulating the activity and subcellular location of MAPKs, whereas the function of small-size atypical DUSPs seems to be more diverse. DUSPs have emerged as key players in the regulation of cell growth, differentiation, stress response, and apoptosis. DUSPs regulate essential physiological processes, including immunity, neurobiology and metabolic homeostasis, and have been implicated in tumorigenesis, pathological inflammation and metabolic disorders. Accordingly, alterations in the expression or function of MKPs and small-size atypical DUSPs have consequences essential to human disease, making these enzymes potential biological markers and therapeutic targets. This Special Issue covers recent advances in the molecular mechanisms and biological functions of MKPs and small-size atypical DUSPs, and their relevance in human disease.

While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative

fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

**Ungifted** Jul 18 2021 Even though her father is running for President of the United States, Grace St. Claire is as normal a girl as they come. She's clumsy, shy, and an outcast among her peers. **Calreticulin** Oct 28 2019 This book is about calreticulin, a multifunctional calcium binding protein first discovered over 20 years ago. The protein has been described in various locations: endoplasmic reticulum, nuclear envelope, cytoplasmic granules, nucleus, cell surface and even secreted into the blood stream. This volume outlines the newly discovered functions for calreticulin including its control of calcium homeostasis, modulation of steroid-sensitive gene expression, control of viral RNA replication, modulation of nuclear transport, role in T lymphocyte activation and cytotoxic killing, chaperone function, control of adhesion-dependent signaling via integrins, possible role in the biology of ticks, in the pathology of autoimmune diseases and in blood function.

Secrets of an Untitled Mind Aug 31 2022 In the middle of the quarantine for COVID-19 after reading one memoir after another Joshua Murphy Dobbs found the inspiration to write his own memoir. Like many others with nothing but time on his hands while out of work his story unfolded in rapid succession in just eight days. His psychiatrist asked him if he was manic after he shared the news that he had just written an entire book since his last Telehealth appointment with her. The book travels through his childhood of finding out he was biracial to a diagnosis of bipolar 1 while in a psych ward in the Army. His struggles to find the right mix of medications would land him in jail more than once. The story follows his life giving the reader hope. Even

though the story follows his life as closely as it can, being a bipolar writer weaves the reader in and out of his life on a roller coaster. In the end his tattoos remind him of who he will become.

**Preface to Plato** Jan 24 2022 Plato's frontal attack on poetry has always been a problem for sympathetic students, who have often minimized or avoided it. Beginning with the premise that the attack must be taken seriously, Mr. Havelock shows that Plato's hostility is explained by the continued domination of the poetic tradition in contemporary Greek thought. The reason for the dominance of this tradition was technological. In a nonliterate culture, stored experience necessary to cultural stability had to be preserved as poetry in order to be memorized. Plato attacks poets, particularly Homer, as the sole source of Greek moral and technical instruction-- Mr. Havelock shows how the Illiad acted as an oral encyclopedia. Under the label of mimesis, Plato condemns the poetic process of emotional identification and the necessity of presenting content as a series of specific images in a continued narrative. The second part of the book discusses the Platonic Forms as an aspect of an increasingly rational culture. Literate Greece demanded, instead of poetic discourse, a vocabulary and a sentence structure both abstract and explicit in which experience could be described normatively and analytically: in short a language of ethics and science.

**Legendborn** Jul 30 2022 An Instant New York Times Bestseller! Winner of the Coretta Scott King - John Steptoe for New Talent Author Award Filled with mystery and an intriguingly rich magic system, Tracy Deonn's YA contemporary fantasy reinvents the King Arthur legend and "braids together Southern folk traditions and Black Girl Magic into a searing modern tale of grief, power, and self-discovery" (Dhonielle Clayton, New York Times bestselling author of The

Belles). After her mother dies in an accident, sixteen-year-old Bree Matthews wants nothing to do with her family memories or childhood home. A residential program for bright high schoolers at UNC–Chapel Hill seems like the perfect escape—until Bree witnesses a magical attack her very first night on campus. A flying demon feeding on human energies. A secret society of so called “Legendborn” students that hunt the creatures down. And a mysterious teenage mage who calls himself a “Merlin” and who attempts—and fails—to wipe Bree’s memory of everything she saw. The mage’s failure unlocks Bree’s own unique magic and a buried memory with a hidden connection: the night her mother died, another Merlin was at the hospital. Now that Bree knows there’s more to her mother’s death than what’s on the police report, she’ll do whatever it takes to find out the truth, even if that means infiltrating the Legendborn as one of their initiates. She recruits Nick, a self-exiled Legendborn with his own grudge against the group, and their reluctant partnership pulls them deeper into the society’s secrets—and closer to each other. But when the Legendborn reveal themselves as the descendants of King Arthur’s knights and explain that a magical war is coming, Bree has to decide how far she’ll go for the truth and whether she should use her magic to take the society down—or join the fight. This paperback edition of Legendborn contains a teaser to the thrilling sequel, Bloodmarked, as well as an exclusive short story from Selwyn Kane's perspective!

**Ethics is a Daily Deal** Nov 02 2022 “Are you an ethical person?” Regardless of your answer, a follow-up probe might be: “How do you know?” Your personal values reflect your beliefs, what you care about. These values, if they really matter to you, are activated by and through your

everyday decisions. How do you ensure that your values, those that reflect your best ethical self, are actually demonstrated in the choices you make on a daily basis? Sometimes what we say we value does not match our actual behavior. Being ethical requires the ability to discern and navigate competing values, continually striving to attain both personal and organizational goals with moral strength. This necessitates the development of skills that support personal governance and your moral competency. To be ethical, building moral strength needs to become a focus of your daily life, which calls for making a deliberate effort to apply the values you say you hold. In reading this book you will see how awareness of your thoughts and emotions—along with specific moral competencies—can influence your desire to do the right thing and bolster your ability to exercise moral strength at work. Drawing insight from the latest research in management, business ethics, organizational behavior, and psychology, each chapter is intended to help adult learners examine, leverage, and continue to develop their best ethical selves in organizational life.
